13GPN & 13CRN5 GLOVES

SEAMLESS KNIT, SAND FINISH NITRILE PALMS & FINGERS

13GPN & 13CRN5 Gloves are used to protect your hands while on the jobsite. 13GPN gloves are general use seamless knit gloves with a sand finish nitrile palm and fingers.

The 13CRN5 gloves are ANSI A5 cut resistant HPPE fiber cored seamless knit 13ga gloves with a sand finish nitrile palm and fingers.

MATERIAL SPECIFICATIONS

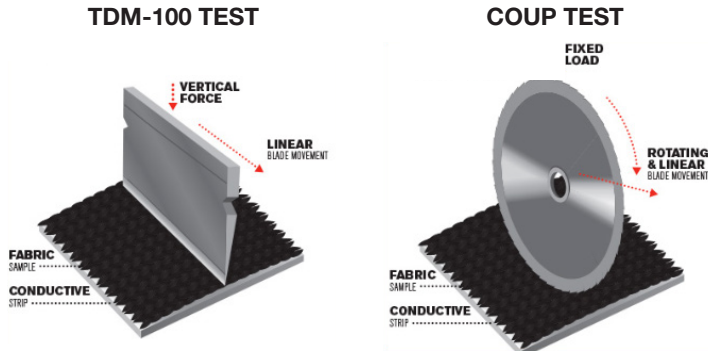

TABLE 1: 13GPN MATERIAL SPECIFICATIONS - CE LEVEL: EN388:2016+A1:2018

ABRASION RESISTANCE	BLADE CUT RESISTANCE	TEAR RESISTANCE	PUNCTURE RESISTANCE	CUT RESISTANCE
4	1	2	1	X

TABLE 2: 13CRN5 MATERIAL SPECIFICATIONS - CE LEVEL: EN388:2003:2016+A1:2018

ABRASION RESISTANCE	BLADE CUT RESISTANCE	TEAR RESISTANCE	PUNCTURE RESISTANCE	CUT RESISTANCE
4	X	4	4	E

TESTING PARAMETERS

*The **COUP TEST** uses a circular blade with a pressure of 5 Newtons to roll and cut across the glove material, while the **TDM-100 TEST** uses the blade to press against the glove material at different pressures and cut back and forth horizontally at a speed of 2.5 mm/s

*Although the new European standard EN 388 stipulates that both **COUP TEST** and **TDM-100 TEST** can be used, under **COUP TEST**, if it is a high-performance anti-cutting material, the round blade may become dull, and if the calculation shows that the blade has become dull after 60 rounds of cutting, the **TDM-100 TEST** is mandatory.

*It should be noted that if this high performance anti-cutting glove has been TDM tested, then the second part of the certification graphic can be written with an "X", then the anti-cutting is only indicated by the letter in the fifth place. ***13CRN5 Gloves above.**

*If it is not a high performance cut-resistant glove, then the glove material is unlikely to dull the blade of the **COUP TEST**, at this time you can not do the **TDM-100 TEST**, the fifth digit of the certification graph is represented by an "X". ***13GPN Gloves above.**
